Voice Over Internet Protocol

Get VoIP For Reduced Call Rates And Increased Capacity

VoIP is Voice over Internet Protocol (IP). It simply means sending voice calls over the Internet as opposed to traditional telephone lines. For the user it feels exactly the same as making a conventional call. VoIP connects you affordably, irrespective of the caller or recipients location or distance.

We have direct connection agreements with other telephony service providers. You therefore receive reduced call rates which in turn save you money on your overall telephony costs.

Cost Effective

Reduced telephone bills. We also bill per second from the first second.

Capacity

Increase and decrease telephony capacity by using software and bandwidth.

Scalability

Additional call capacity can be added by increasing the size of the Internet line.

Carrier-Grade

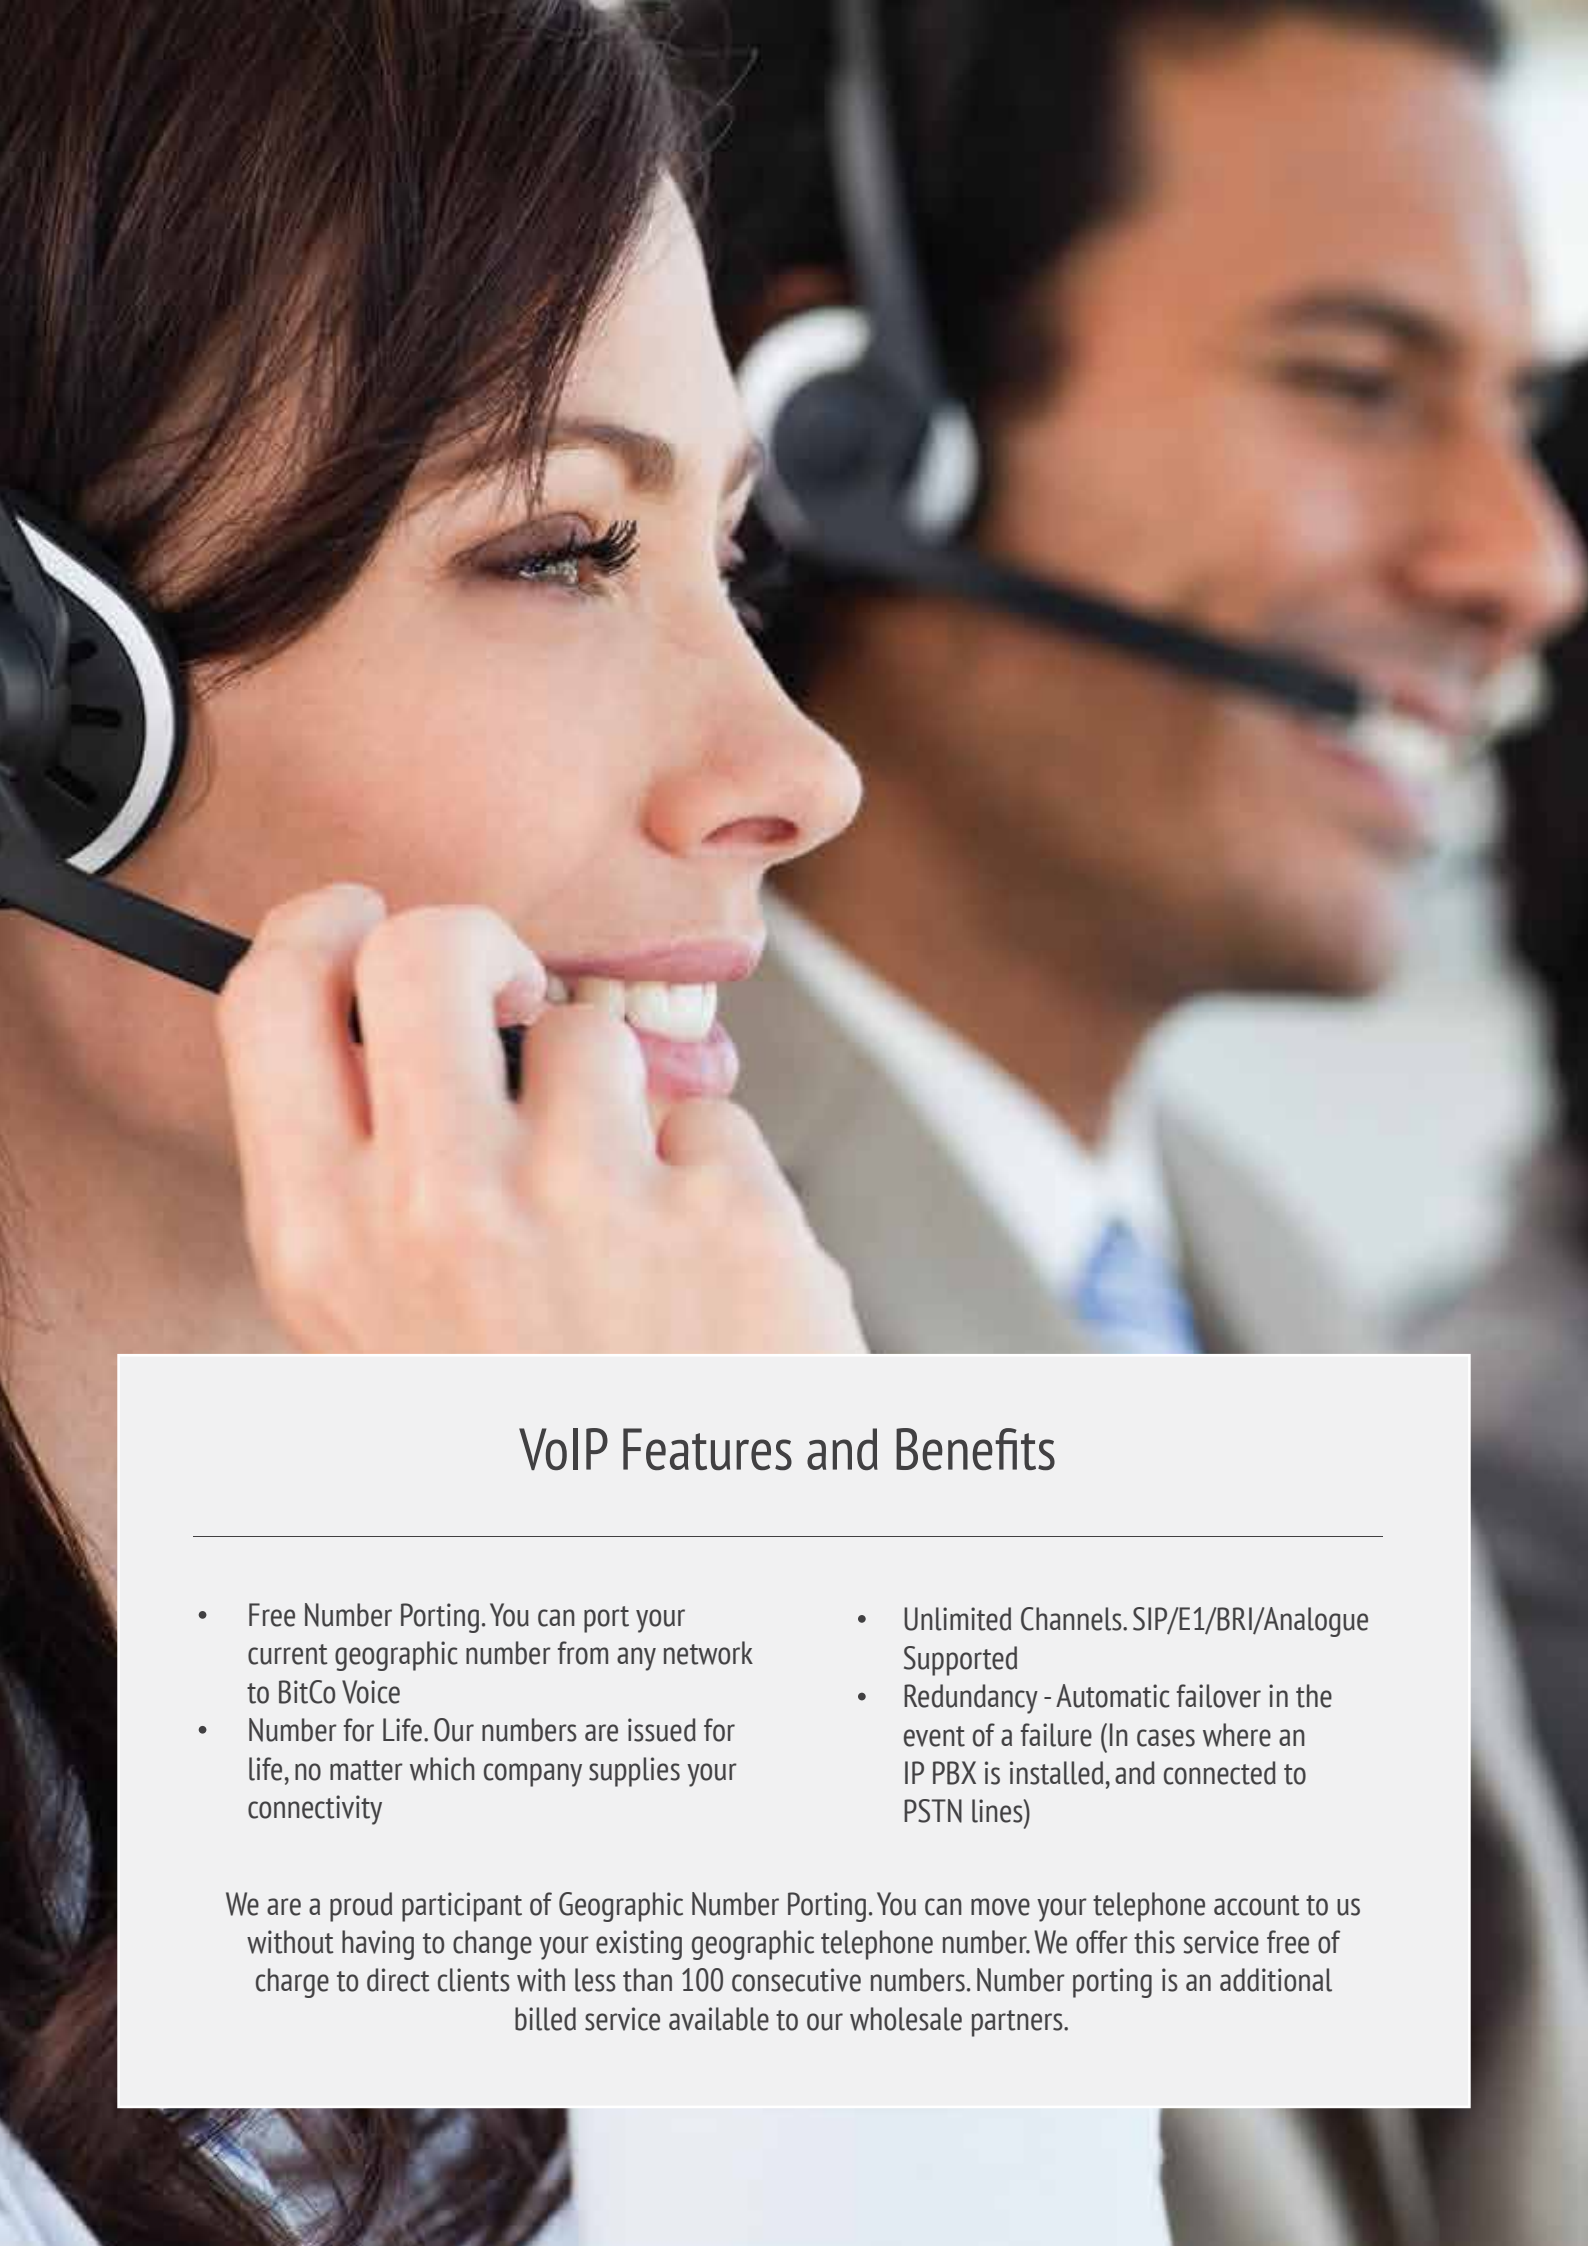

We have three voice distribution centres. Connect to the closest for the best quality.

Compatibility

For a complete VoIP solution, Our IP PBX and VPBX is Voice-ready.

VoIP Features and Benefits

- Free Number Porting. You can port your current geographic number from any network to BitCo Voice
- Number for Life. Our numbers are issued for life, no matter which company supplies your connectivity
- Unlimited Channels. SIP/E1/BRI/Analogue Supported
- Redundancy - Automatic failover in the event of a failure (In cases where an IP PBX is installed, and connected to PSTN lines)

We are a proud participant of Geographic Number Porting. You can move your telephone account to us without having to change your existing geographic telephone number. We offer this service free of charge to direct clients with less than 100 consecutive numbers. Number porting is an additional billed service available to our wholesale partners.

Feature Rich, System Ready Web Based PBX

An IP PBX is a switchboard or Private Branch Exchange which uses Internet Protocol. It is a server which uses your Internet Connection to route all your incoming and outgoing calls. Your customers can get hold of the right person immediately. Routing can be based on any means you choose: time, skills or hunting.

You can either use your existing Internet Connection or we can assist you with setting up a Fibre or Wireless Solution at your premises. Additional features of the PBX can be installed remotely with a click of a button. This means no costly call out fees when you want to make changes on your PBX

Reduce Capex Spend. Get a Virtual PBX.

Get all the feature rich functionality without the clutter and pain of having an on-site PBX solution. You not only save on capital hardware costs, but automatically get the reliability of having your telephony system in the cloud.

Self Managed

Redundant Connectivity

Reduce Capex Spend

Top Level Location

IVR and Call Reporting

Call Reporting and Billing Reports

Simple and Fast Setup

Scalable and Customisable

Our VPBX means that your calls divert to our data centres. We use our secure technology to re-route the call and direct it appropriately. This solution can provide you with a range of features not available on a traditional PBX. It is software based, therefore installation is relatively quick and easy. It works with most VoIP and SIP compliant IP phones or analogue phones.

VoIP Gateway

Enjoy the cost saving benefits of routing your Voice calls via BitCo without having to purchase a new PBX with a VoIP Gateway.

A VoIP Gateway is a device which converts telephony traffic from analogue to digital. Telephone calls are converted to digital packets, enabling telephone calls to transport over a local area network (LAN) or other IP-based network.

Using our VoIP Gateway, all your outgoing calls will be routed to BitCo Voice (BitCo's Voice over IP solution) without having to change your current PBX system. Our solution has proven to be interoperable with all major soft switches and SIP-PBX brands.

Uncapped Voice

Fixed Voice solutions that are tailor-made to fit your budget and organisation size. Our premium services make communication work for you by saving on call costs by fixing your spend. Fixed rates save you money on your overall telephony costs.

Phones and Conferencing

Our wide range of high quality Internet Protocol (IP) telephones and conferencing phones offer a large number of functions. They offer various levels of sophistication and security, whilst still keeping business communication simple and efficient.

Brands: Yealink, Polycom and i-Serve.

Official Internet Service Provider to CSA and The Proteas
